

# Call for an Android App Developer

---

**Title:**

Android App Developer

**Employer:**

MediaLAB Amsterdam

We are looking for an app developer to produce a working prototype of an Android app that allows users to chat using voice, text, images and video. Development is in collaboration with a student team of the MediaLAB. The assignment is to develop a prototype, and there's the possibility to develop further for Android as well as iOS in a later stage. The final prototype should be delivered by June 2013.

**Description:**

The assignment is to develop an integrated multimedia application to communicate/ send messages via voice, text, images and videos. Features that are additionally required are:

- Implement tagging (keywords) and clustering or color-coding parts of a thread
- 2 contact lists - 1 based on phonebook and 1 using people registered on the app
- Create an archive to tag, save and store parts of conversations
- Searching in the archive based on categories and tags(keywords)

**Key responsibilities:**

- Develop the fully working BETA version (prototype) which may be developed further (also for iOS)
- Create the front-end (UI) and back-end (for archiving, etc). The interaction design(.psd & .ai) and information structure will be designed by student team
- Fully annotated code
- Comprehensive documentation and archiving of the code (server or Github)
- Close collaboration with the student team is required with negotiable hours in the MediaLAB (near Weesperplein).

**Application deadline: 26th of april 2013**

Please send a resume(with portfolio if available) and motivation letter to: Sabrina Doornekamp, s.doornekamp [at] gmail.com
